

July 21, 2021 – Quality Control and Survey Technician

We are currently recruiting Quality Control and Survey Technicians to join our growing team in British Columbia. This position offers a rewarding opportunity to work on key projects and build your career with a fast-growing company and a close-knit team that supports your personal and professional development. Candidates should demonstrate experience performing quality and survey control on various civil construction projects with preference to mining with limited supervision and direction.

General Duties & Responsibilities:

- Perform routine field compaction testing, sampling and observation of soils, utilizing nuclear density gauges
- Operate various Survey equipment including but not limited to Total Station, Laser, Transit, Tripod, Grade Rods, Hand Levels, Stakes, Paint, and Tape, to establish and mark property boundaries, elevations and grades
- Manage the Quality Control ITP (Inspection Testing Plan) while performing field QC inspections and surveys
- Complete soil density testing to ensure materials conform to plans, specifications, and guidelines set by the ASTM
- Document results, perform daily field reports summarizing observation and calculations
- Save and upload all testing data and survey data on a daily basis
- Monitor construction activities to ensure work performed fully adheres to specified and established grades
- Double check grades and help the Supervisor and operators make sure quality is met
- Daily communication with operators, sub contractors, Construction Supervisor(s) and Project Managers
- Read and interpret drawings, plans and diagrams to perform required work
- Oblige to Health and Safety Procedures and Processes while performing inspection of tools and equipment
- Follow equipment and tool maintenance schedule and advise if repair is required
- Perform other related tasks as needed

Requirements:

- Working knowledge of GPS and GIS preferred
- 3 years' experience in quality or survey control
- Radiation Safety & TDG - Portable Gauge Users Certification (or be willing to complete the required certification)
- Capable of being easily taught, trained and certified to operate the required equipment
- Tech Savvy - aptitude in math/problem solving
- Ability to maintain a professional demeanor
- Safety mindset 1st priority
- Proficient with MS Office products
- Mining Experience recommended
- Ability to pass Drug and Alcohol pre-screen

What we offer you:

- Competitive Wage
- Multidisciplinary projects and challenges
